

Northeast Regional Biomass - Retrospective 1983 - 1993

January 1995

This report is an account of the work of the Northeast Regional Biomass Program (NRBP) over its first ten years (1983-1993). The report describes the NRBP's mission, goals, and strategies, the work of the individual states that make up the Northeast region, and each of the technical studies carried out. The NRBP has undertaken over 60 applied research and technology transfer projects and supported the work of its eleven participating states, bring together public and private sector organizations to promote the use of biomass energy resources and technologies.
